EXPERIENCE

Graduate Research Assistant, Ph.D.

International Center for Hadron Astrophysics (ICEHAP)

April 2017 – December 2023 | Chiba University

- Search for Ultra-high Energy Neutrinos from Askaryan Radio Array (ARA) by Template Method
- Classified astronomical signal by **statistical-oriented Principal Component Analysis (PCA)**, after obtaining features from ∼**200 TB dataset** of radio-frequency data that measured below the South Pole.
- Implemented automation solutions for utilizing **large CPU & GPU clusters** by building **scientific Python & C++ packages** to streamline data analysis workflows and enhance productivity, leading to **wide use by international collaborators**.
- Implemented physics techniques, such as the **Fast Fourier Transform (FFT)**, **Interferometry**, and the **Matched Filter**, into the package for **feature extraction**.
- Optimized the PCA based on **Frequentist Statistics** and **Pseudo Experiment**.
- Evaluated & quantified results by using statistical techniques, such as calculating **statistical significance**, including **systematic uncertainty**, and **Monte Carlo simulation**.

Graduate Research Assistant, MSc.

Neutrino AstroParticle Physics Lab (NAPPL)

March 2015 – February 2017 | SungKyunKwan University

- IceCube, a large-scale scientific detector, Camera System to Study Properties of the Antarctic Ice
- Classified intrinsic camera noise appearing in extremely low-temperature conditions from images using **feature extraction**.
- Developed **Python package** to control the camera by **Raspberry Pi** and **automatic data collection**.
- Evaluated the performance of camera system by applying statistical techniques to **large image datasets**.

Japanese to English & Korean Translator

Wovn.io

February 2018 – August 2018 | Tokyo

- Provided translation services and real-time deployment for the client company website written in Japanese, incorporating cultural nuances to enhance readability and accessibility.

PROJECT

Sound to Symphony (AI Music Generation)

Le Wagon Data Science & AI Bootcamp

January 2024 – March 2024 | Le Wagon, Tokyo

ABOUT ME

I'm an Astrophysicist used to analyzing large datasets to find astronomical signals and recently graduated from Le Wagon Data Scientist & AI boot camp. Seeking to utilize programming skills backed by my scientific background and data science knowledge.

TECHNICAL SKILLS

Coding Tools

Python | C++ | ROOT | Vim | HTCondor | CVMFS | Latex | G-Collab & Jupyter

Data Analytics

NumPy | SciPy | Scikit-learn | Pandas | SQL | Matplotlib | Seaborn

Modelling

TensorFlow | Deep Learning | Unsupervised Leaning | NLP | CNN | Time series | Ensemble Methods | Statsmodels | LLM

Deployment

GCP | Docker | FastAPI | Streamlit

Hardware Experience

Electronics | Optics

LANGUAGES

English	Fluent
Japanese	JLPT N1, Fluent
Korean	Native

INTERESTS

Classical Music | Orchestra | Contrabass | Universe | Fourier Transform

- Generates completely new music by **Recurrent Neural Network (RNN)** that can be easily customizable by musical software
- **Architectures RNN model for learning musical patterns** from large classical music datasets that are expressed in numerical format.
- Deployed the project into the **Streamlit** by utilizing **FastAPI**
- Built the connection between generated music and musical software Abelton

EDUCATION

Data Science & AI Bootcamp

Le Wagon

January 2024 – March 2024 Japan

- Thorough study in Python for Data Science, with expertise in data extraction, manipulation, and visualization, backed by a strong foundation in statistics and linear algebra.
- Delving into Machine Learning and Deep Learning, with practical application in building comprehensive workflows utilizing Scikit-Learn and designing neural network architectures.
- Proficiency in ML Engineering, involving the development of Python packages for large-scale data tasks in GCP, and a deep awareness of the ethical considerations surrounding AI deployment.

Completion of Ph.D. program (ABD), Physics

Chiba University

April 2017 – December 2023 Japan

- Research topic: Search for Ultra-high Energy Neutrinos Using Eight Years of Data from Two ARA Stations by the Neutrino Template Method

Master of Science, Physics

SungKyunKwan University

March 2015 – February 2017 South Korea

- Thesis title: Performance study of camera system for the IceCube-Gen2 detector

Bachelor in Science, Physics

SungKyunKwan University

March 2011 – February 2015 South Korea

AWARDS

Japanese Government Monbukagakusho Scholarship (MEXT)
Graduate Research Assistant in Ph.D., 2017 – 2020

Teaching Assistant (T.A.) of Korea & Japan Joint Government Scholarship
Teaching Assistant for a freshman Korean students, 2017 – 2018

BK21+ Research student scholarship
Graduate Research Assistant in Msc., 2015 – 2017

Operating Assistant scholarship
Physics Experiment Assistant, 2016 – 2017

CK Research student scholarship
Research Assistant in Bsc., 2014
